Fault Detection Performance for IDV(3)

Combined T^2 and SPE statistics — AEO vs. PCA at a common 1% false-alarm rate

Held-out performance (mean of 7 independent runs)

AEO	delay	266.0 samples (798 min)	MDR 0.989	detected in 1/7 runs
PCA	delay	322.5 samples (968 min)	MDR 0.988	detected in 2/7 runs

Fault not reliably detected by either method (caught in fewer than half the runs)
