Fault Detection Performance for IDV(9)

Combined T^2 and SPE statistics — AEO vs. PCA at a common 1% false-alarm rate

Held-out performance (mean of 7 independent runs)

AEO	delay	177.0 samples (531 min)	MDR 0.987	detected in 2/7 runs
PCA	delay	66.0 samples (198 min)	MDR 0.988	detected in 1/7 runs

Fault not reliably detected by either method (caught in fewer than half the runs)
